EFFICIENT "INDOOR SUNSHINE"

Jackson, Mich. — Patented EverLast lighting technology from Full Spectrum Solutions is essentially a fluorescent lamp without electrodes. With the absence of electrodes, the lamp relies on the fundamental principles of gas discharge and electromagnetic induction to produce light. With a lifespan of as many as 100,000 hours this system can last longer than 100 incandescent, five HID, or five typical fluorescent lamp changes. EverLast induction fixtures provide light with a more natural, high color rendition, and a dimmable option, the company reports. www.fullspectrum solutions.com.
