

Everlast Induction Lighting

Induction lighting from Everlast presents a high-tech approach to sustainability by providing 60 percent energy savings over conventional lamps, with dimmable and sensor options available throughout the line. Products are available for indoor and outdoor use, and offer the additional benefit of long life; with an expected 100,000 hour life they are essentially maintenance free. Everlast is supplied for a wide array of uses, from sensor controlled 100w Cobra Heads to 250w Aluminum High Bays.

According to Joelle Kollhagen, Marketing Director for parent company Full Spectrum Solutions, induction lighting works by igniting the phosphors magnetically, and Everlast takes the technology a step beyond in eliminating EMC interference and lumen depreciation over the life of the product. The line is ideal for the workplace because it supplies even illumination that supports visual acuity. "We saw a tremendous response to the product line at Lightfair," Kollhagen said.

Dimmable GU24 Lighting

MaxLite's Brigantine Collection combines an elegant traditional design with the modern dimming technology of GU24 CFLs. The dimming works with any standard incandescent dimmer and the lamps maintain their warm color throughout the dimming range. The collection features a ceiling fixture, hanging pendant, wall sconce, and a single and a four light vanity, with future additions of a three lamp and five lamp chandelier planned.
